### ABSTRACT

India trimmings the list in sugar production in the world next to Brazil. Being the most popular country, India's requirements of sugar are also very large. The demand for sugar is ever on the increase on account of increasing population as well as due to an improvement in the standards of living of the masses. Tamil Nadu is one of the major sugar producing states in India and it contributes on an average of nineteen lakhs tonnes of sugar annually, which is about ten per cent of the total production of sugar in the country. The present study analyzes the performance of Sugar Company in Tamil Nadu through financial analysis techniques like ratio analysis. In which various ratios like short term solvency ratios and long term solvency ratios were calculated. Mean and Standard Deviation, have been computed from the ratios for further analysis of the financial data. The study was concluded that the financial performance of the sugar company have been moderate.

**KEYWORDS:** Financial Health, current ratio, quick ratio, short term solvency and long term solvency ratio.
