### **ABSTRACT**

In recent years, the volatility in market prices is creeping with danger signals. Volatility is acceptable to some extent to attract the new investors. In India, derivatives trading was introduced with such an intention to control the excess volatility. The emergence and growth of the derivatives market in India is relatively a recent phenomenon. But it has exhibited exponential growth in terms of both volume and number of trade contracts. The present study encompasses in its trend and growth of the derivatives market in India. The study is descriptive and based on the information compiled from the Website of NSE. There is tremendous growth in the derivative market in the period of 12 years. In the derivative market Index option is at the top of all the products available. In the future, Indian market is expected to become more vibrant and attain a leading position in the global financial system.

**KEYWORD:** Derivatives, Derivative Market, Trend and Growth pattern, Turnover, Volatility.
