ABSTRACT

Information technology not only plays a significant role in our social lives but it has a huge impact on various domains of professional life as well. This paper addresses the impact of Information Technology on selected disciplines of Finance like Accounting, Banking, Exchanges & Mergers and Acquisitions. This paper presents a review of randomly selected research work done by eminent professionals on the said disciplines across the globe as per their availability. The number of papers considered is limited to 12 as the objectives of the study were confined only to these disciplines. The paper concludes that IT has made financial tasks easier, faster, more accurate, unbiased, and user friendly provided it is secured.

KEY WORDS: Information Technology, Accounting, Banking, Stock Market, FOREX, Mergers & Acquisitions
