### ABSTRACT

The market is the place, either physical or virtual, where the forces of demand and supply come into play, deciding the marketable price of a good or a service or a traded security and its availability. The major classification to the economy forms, i.e., the right-wing, the left-wing and the centrist forms display distinct forms of economic methodologies at play, which effects both the volume and nature of the trade in a particular economy or country and subsequently the particular arena of securities market.

This research article tries to find the various methodologies employed by those varied economic forms and their possible resultant paths that the market treads. Also, the study focuses on the conceptualization of a few insights, arrived at by the study.

**KEYWORDS:** Market economics, Market Intelligence Framework (MIF), Capital Requirement Ratio (CapR Ratio), Liquidity Requirement Ratio (STR Ratio).
