ABSTRACT: with the improved innovations in financial engineering, derivative market has also grown marvelously and has intertwined with underlying stocks. The relationship between the physical market and derivative market shows the behavior of investors in investing money in stock market. This study clearly shows the partition of speculator's market and real investor's market. The study considers the time frame of 2001-02 to 2014-15.

KEY WORDS: Physical Market, automated screen based trading system, option market, future market.
