ABSTRACT:

This paper points to the use of technological tools in the field of education. It indicates inevitable changes which are necessary and beneficial for language teaching. In addition it shows the interaction between three important factors in education: teacher, technological tool, and student. Although we cannot deny the role and importance of each factor, during this survey we see that the most importance has put on the role of the teacher. Technological tools in turn act as a medium of linking teachers and students with each other and with the world.

KEY WORDS: Digital age, teacher, technological tool, student
