### ABSTRACT

The industry needs when perceived from a broader perspective could be summarized as an input of the essential 4 Ms, the **Manpower**, **Material**, **Money**, **Machinery**, these when input to a process result in the required or planned output in the form of goods or services for the resultant **M**, the **Market**. This breaks into three parts, namely the input, the process and the output. And the most important parameter is ensuring the quality of the input and the process for a better yield or output. There exists quality ensuring professionals and systems for ensuring better quality and this paper makes an abstract sketch of a distinct department or professional practice of both the quality ensuring systems and quality insurance by the help of developing a discriminating function.

**KEYWORDS:** Process Quality Determinant (PQD), Quality Insurance Methodology (QIM);
