ABSTRACT

A good governance states that the adoption of good government is defined as traditions and institutions by which authority is exercised, policy conducted and government managed. Current study aims at analyzing the transparency levels in e-governance in UAE and examine to what extent transparency is useful for its citizens, individuals and businesses. The study will also focus on the challenges the government is facing in managing transparency. Analysis of the study is completely based on review of the past literature, official documents and publications on transparency levels. Results of the study indicate that UAE is facing major challenges in managing transparency where in majority of the e-Government Services offered by government are under process of integration. This may be due to lack of communication between various departments and various public sector units. The implementation needs more acumen as setting an e-Strategy encompassing e-Government is a practical and efficient policy and provides instruments for addressing both traditional challenges.
