ABSTRACT

India is one of the countries which lies in Indian Ocean Region (IOR) and sometimes also called "World's Hazard Belt". Every year India faces a host of events and processes which turns out to be the major disasters of the world. Being a fast growing developing economy of the world, it faces huge amounts of losses each year- both in property and lives. While the disaster situation worsens in the country each year, relief agencies, media and even the bureaucracies treat each disaster purely as an act of Nature. Disasters are attributed to the floods, cyclones, earthquakes, droughts, landslides or whichever is the hazard of Nature. Every time nature is blamed, while the Responsibility is seized.

KEY WORDS: Natural Hazards, Disaster, Disasters cape, Reliability, Resilience
