ABSTRACT:

Paddy cultivation is one of the main agriculture sector of Kerala. Even though Chittoor in Palakkad Dist and Kuttanadu in (Alappuzha dist) are the main places of paddy cultivation, small and big paddy fields are scattered across the state. The younger generation have no interest in agriculture and the paddy fields are filled with grass and used for making buildings and other activities. This paper tries to examine the reason for the reduction in paddy farming in Kerala.

KEYWORDS: Paddy, Agriculture, farmer, green revolution, grading.
